

# Vaccination Serology

**SAMPLE REQUIRED:** Serum,  
minimum of 1ml

**BLOOD TUBE REQUIRED:** Serum  
tube, red or gold top

## Indications:

- Evaluation of vaccination status in dogs and cats.

## Testing Available:

**Dogs:** Canine parvovirus, canine distemper, canine adenovirus.

**Cats:** Feline panleukopenia, feline herpesvirus, feline calicivirus.

Kennel cough serology is not available.

## Collection Protocols:

Samples can be collected at any time.

## Notes:

- Evaluating vaccination serology assesses whether additional vaccination is indicated or not. This is of particular importance in at risk animals.
- Vaccination serology measure IgG levels, which have been shown to predict protection from infection. This IFA methodology is comparable to the gold standard haemagglutination test for CPV and virus neutralisation for CDV.
